

## Corporate Introduction

Elocity™ is a Canadian EV charging technology company operating in 12 countries across four continents. We deliver end-to-end smart EV charging solutions for multi-residential and commercial buildings, public sites, workplaces, and utilities.

We provide vendor-agnostic software and EV chargers to enable reliable, cost-effective, and scalable EV charging deployments. As the first Canadian company to achieve full OCPP certification, our platform eliminates vendor lock-in and supports over 50 different EV charger models—compatible with all EVs sold in North America and key global markets.

Elocity is powering some of the world's most ambitious EV charging projects, including North America's largest single-site multi-residential deployment with more than 1,200 EV chargers, and the world's largest utility-led EV charging rollout, with over 8,000 EV chargers.

## Elocity's EV Charging Ecosystem

### White-Label Software

Customizable software solutions for global brands

### Load Management

Features to optimize energy distribution

### Large-Scale Deployments

Successful implementation of large projects

### Made-In-Canada Technology

Proprietary technology driving innovation
