We provide vendor-agnostic software and EV chargers that enable reliable, cost-effective, and scalable deployments. As the first Canadian company to achieve full OCPP certification, our platform eliminates vendor lock-in and supports over 50 charger models—compatible with all EVs sold in North America and other key global markets.

Made in Canada for the World

Elocity is powering some of the world's most ambitious EV charging projects, including North America's largest single-site multi-residential deployment with more than 1,200 chargers, and the world's largest utility-led EV rollout with over 8,000 chargers under deployment.

Systems and Solutions

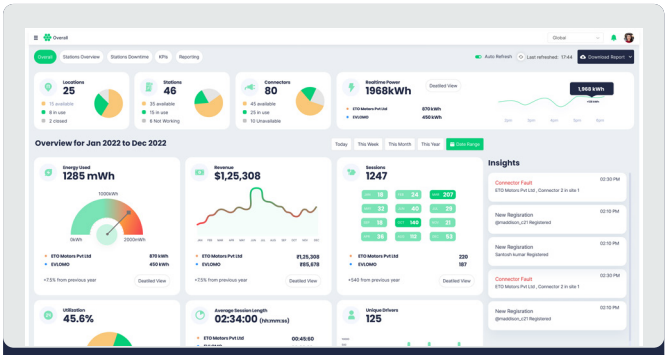

Smart L2 Chargers and Charging Stations

- Wall Mounted
- Pedestal Mounted
- Ceiling Mounted
- Cable Management

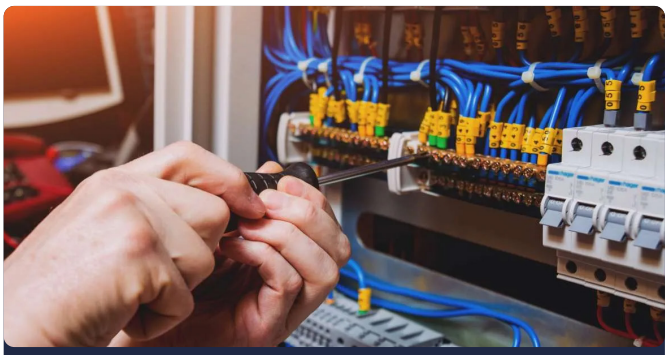

Smart L3 Chargers (30 kW–1 MW)

- High-power DC fast charging
- Scalable 30 kW–1 MW (CCS/NACS)
- Smart load + remote diagnostics
- OCPP certified

EV Charger and Energy Management Software

- First OCPP-certified Company in Canada
- Smart load and energy control.
- Automated billing and reporting.
- OCPP-compatible with major chargers.
- Interoperable with 50+ charger makes and models.

Design, Installation, Commissioning and Support

- Site design and project assistance.
- Full installation and commissioning.
- Safety and performance testing.
- Ongoing maintenance and fast support.

Smart Level 2 EV Chargers and Charging Stations

Elocity's Smart AC Level 2 chargers are available in five configurable power ratings (32A, 40A, 48A, 64A and 80A), delivering 7.7 kW to 19.2 kW from a 208V/240V single-phase or three-phase supply. The range includes single-port and dual-port models in wall-mounted and pedestal-mounted formats, along with a 32A single-port ceiling-mounted option. Units are offered with J1772 or NACS connectors and include built-in electrical and ground-fault protection. Cloud connectivity supports dynamic load management and real-time billing metrics. NEMA 4/IP65-rated enclosures allow indoor and outdoor installation across residential, commercial and multi-unit residential sites.

Smart Level 3 EV Chargers

Elocity offers DC fast charging solutions through strategic collaborations with established global manufacturers. These partnerships give customers access to proven, high-performance fast-charging systems for public, fleet, corridor and commercial deployments, with power outputs scaling to the megawatt range.

- **Proven partner network**: DC fast chargers are sourced from established manufacturers with production in the United States, South Korea and Finland.
- **Deployment flexibility:** Systems are suited to public charging, fleet depots, highway corridors and commercial sites.
- **Scalable power:** The DC fast charger range extends to megawatt-class output for high-demand applications.
- **Integrated delivery:** DC fast charging is part of Elocity's end-to-end EV charging infrastructure offering.

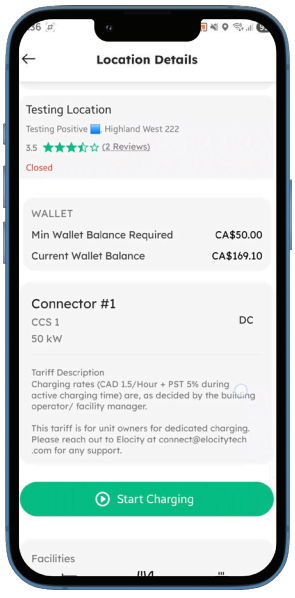

Elocity's Charge Point Management Solution

Elocity's charge point management software monitors, controls and optimizes every charger from one dashboard built for property managers, not electricians.

- Real-time monitoring & remote control
- Billing, invoicing, & tariff management
- Smart energy & load management
- Sub-metering & authentication
- Reservations & scheduling
- Data analytics & reporting

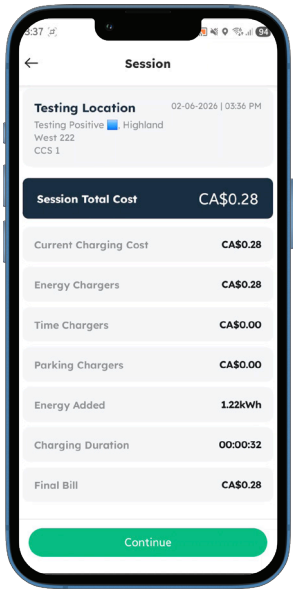

Live in **12 countries, across 50 charger makes and models** compatible with all EVs sold in North America.

EV Driver Mobile App

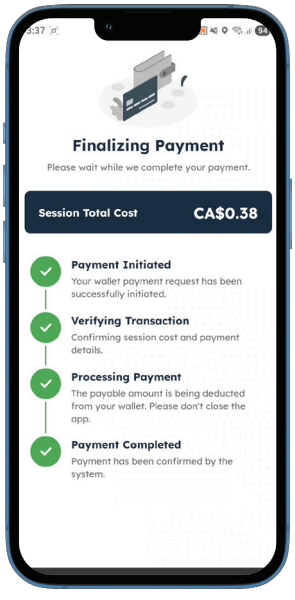

1. Start

Tap to begin charging via RFID or the app.

2. Complete

Track the session live, then plug out.

3. Pay & go

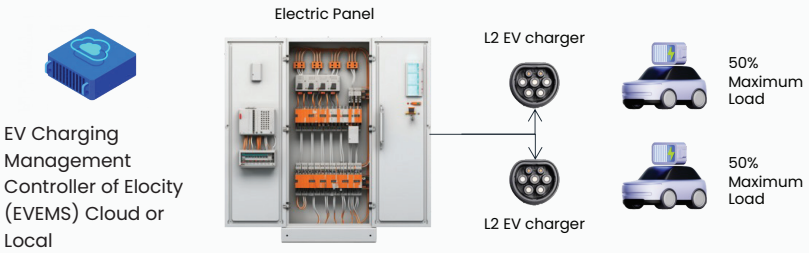

Billed automatically to the resident's account.

Smart Load Management

Elocity's smart load management platform balances power across circuits, panels and whole-building load using three operating modes. This allows a property to install significantly more chargers on its existing electrical service, without costly upgrades.

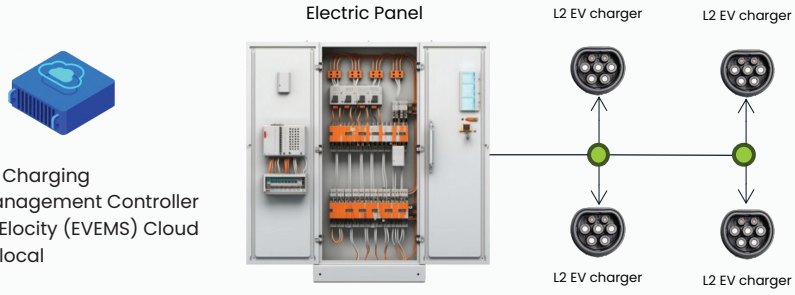

Static

A fixed power allocation is set per charger, in line with the site's available capacity.

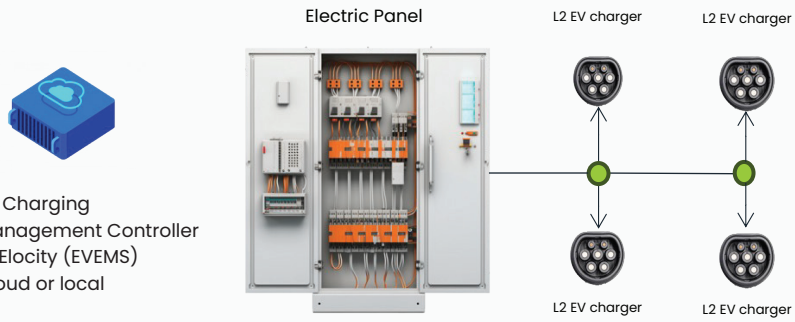

Rotational

Time-shared power rotates fairly across connected vehicles over the charging window.

Dynamic

Output adjusts in real time to the number of vehicles actually plugged in, so available capacity is always fully used.

Our Load Management Technology

- Circuit Sharing
- Panel Sharing
- Building Load Management
